                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                The invention relates to a novel method for identifying a compound capable of treating a haematological disorder which comprises combining a compound to be tested with a specific polypeptide under conditions suitable for binding of the test compound to the polypeptide. The method of the invention has haematological and cytostatic applications and may be useful for identifying compounds for treating a haematological disorder associated with erythroid cells e.g. anaemia and erythrocytosis, bone marrow e.g. leukaemia, platelets e.g. thrombocytopenia and thrombosis or B-cells and T-cells e.g. neutropenia. The compounds identified may be utilised during gene therapy procedures. The current sequence is that of a human haematological disorder-related cDNA of the

The invention relates to human homologues of neuronal apoptosis regulated.

Candidate (NARC) nucleic acid molecules and proteins derived from rat

Candidate (NARC) nucleic acid molecules and proteins derived from rat

Candidate (NARC) nucleic acid molecules and proteins of the

invention are useful for assaying the presence of a nucleic acid molecule

and for chromosome mapping. They are also used in gene therapy and

antisense therapy. The NARC sequences are useful for treating central

Candidate spleem disorders involving aberrant apoptosis, for

inducing an immune response and for isolating binding partners. Diseases

created include spleem disorders (e.g. tuberculosis and congestive

splenomegaly, lung disorders (e.g. tuberculosis and congestive

splenomegaly, lung disorders (e.g. tuberculosis and congestive

Goodpasture's syndrome and bronchial asthma', liver disorders (e.g.

iaundice and hepatic failure), infectious disorders (e.g. viral

conforting, brain disorders (e.g. cerebral oedema, hypertensive

cneephalopathy and hydrocephalus), heart disorders (e.g. cysts and

congina and myocardial infarction), kidney disorders (e.g. cysts and

splenarionephritis), testes and epididymis disorders (e.g. cysts and

syphilis), skeletal muscle disorders (e.g. tumours) and pancreatic

disorders (e.g. pancreatitis and disorders). The present sequence is human

construction apoptosis regulated candidate (NARC) 16B DNA
                                   Rat brain polypeptides, nucleic acids and antibodies, useful for diagnosis and treatment of central nervous system disorders and disorders associated with aberrant apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            444
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

Novel isolated programmed cell death-related polypeptide, NARC10 and NARC16, useful for treating disorders associated with abnormal apoptotic process e.g. Alzheimer's disease, cancer, myocardial infarction, stroke.

Claim 1; Fig 4A-C; 123pp; English.

This invention describes novel cell death-related polypeptides NARC10 and NARC16, located on chromosome 4q11-4q21 and which have cardiant, antiHIV immunosuppressive, dermatclogical, antiHIV cardiant, vasotropic, antimanic, antidiabetic, immunosuppressive, cytostatic; thyromimetic, nephrotropic, neuroprotective, anticonvulsant, tranquiliser, hypotensive and contropic, anticonvulsant, tranquiliser, hypotensive and contropic, anticonvulsant, tranquiliser, hypotensive and contropic activity anticonvulsant, tranquiliser, hypotensive and contropic, anticonvulsant, tranquiliser, hypotensive and contropic, cinvention can be used to modulate NARC10 or NARC16 polypeptides or polyputalectides, to map NARC genes on a chromosome, e.g. to locate gene contropic, and are therefore useful for modulating the capporteric process, and are therefore useful for modulating and treating disorders associated with increased apoptosis, inhibition of apoptosis or disruptions in cell cycle, for regulating cellular functions including process, and are therefore useful for modulating and treating process, and are despendent tumours, inhibition of apoptosis or circating disorders associated with abnormally low rate or abnormally high rate of apoptosis e.g. cancers including follicular lymphomas, carcinomas (collicular systemic lupus erythematosus, diabetes, graft rejection, including systemic lupus erythematosus, diabetes, graft rejection, including and immune diamental size cycle of neurons (including admining and policular virus-induced lifections e.g. infections caused by herpes viruses, virus-induced lifections e.g. infections caused by herpes viruses, virus-induced lifections e.g. infections caused by herpes viruses, virus-induced controposic lateral sclerosis, spinal muscular atrophy, retinitis and immune degeneration, mypodysplastic syndromes (including aplastic anaemia), isohaemic diplated cardiomyopathy, and valvular heart disease, parkined cardiomyopathy, and valvular disease, idiopathic dilated cardiomyopathy, and valvular disease, disorders, senile dementia, Huntington's disease, hypertension, eschizophrenia, attention deficit disorder, mania, anxiety, severe bipolar affective disorder (BP-I). This sequence encodes the human NARC16 protein described in the method of the invention

                                                                                셤
                                                                                                   8
                                                                                                                                                                                                            The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer; (b) monitoring the efficacy of a therapy for inhibit ing prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          460

```

The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. noncancaus) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the corresponding to a marker of the invention and a method of a gene corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention and a method of treating a corresponding to a marker of the invention. The patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the carpression levels indicates ovarian cancer. The level of expression of a corresponds to a secreted protein or to a transcribed captered by detecting the presence in the sample, a protein or protein of sassessed by detecting the presence in the sample, a protein or protein fragment is detected using an antibody that specifically binds with the corresponding to the marker. The level of expression of fragment is detected using an antibody that specifically binds with the corresponding to the marker. The presence of a transcribed corresponding to the marker. The level of expression of the marker is assessed by detecting the presence of a transcribed corresponding the marker or anneals with a portion of the polynucleotide which anneals with the marker is a special or protein fragment is a conting the marker or anneals with a portion of conting the marker is a special fragment in a partion of protein or protein fragment is a conting the marker or anneals with a portion of protein fragment is a conting the marker or anneals with a portion of protein fragment is a conting the marker or anneals with a portion of protein fragment is a conting the marker or anneals with a portion of protein fragment is a conting the presence or anneals with a portion or protein fragment is marker is also used for monitoring the progression of ovarian cancer in a cancer cells as compared to their normal non-cancerous ovarian cells are used to characterize stage, grade, histological type of ovarian cancer. patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the marker in a patient time and comparing the level of expression. The method at a subsequent using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer this sequence represents a human ovarian cancer DNA marker of the invention. Claim 1; SEQ ID NO 1565; 3069pp; English. The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence	orresponds to one of the polynucleotides of the invention. equence 5443 BP; 1544 A; 1034 C; 1149 G; 1716 T; 0 U; 0 Other; ent Scores:	Pred. The present sequence is of cDNA clone DNA327983 encoding novel human PRO polypeptide PR081903. The invention provides newly identified and reduced to solated nucleotide sequences encoding polypeptides referred to as PRO isolated inseases. Microarray analysis showed that DNA327983 is upcompared diseases. Microarray analysis showed that DNA327983 is upcompared to non-lesional Brin from regulated 1.5-fold in lesional skin as compared to non-lesional Brin from psoriasis patients as compared to normal colon samples from Crohn's cisease patients as compared to normal colon and up-regulated 1.3-fold in colon samples from crohn's compared to normal colon and up-regulated 1.3-fold in colon samples from crohn's colon hand to colon samples from crohn's colon from healthy donors. It is also down-regulated 1.5-fold upon activation of monocytes with LPS. PR08393 can be used in a claimed cot colon in the colon colon sample colon colon samples colon colon colon samples colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colon colo

The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV02213) of the appecification or its complement. (I) is useful for: (a) assessing whether progression of prostate cancer; (b) monitoring the progression of prostate cancer; (b) monitoring the progression of a therapy for inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; determining whether prostate cancer has metastasized in a patient; (l) assessing the aggressiveness or indolence of prostate cancer in a patient; (I) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                              cancer; cytostatic; carcinogen; pharmacodyanamic marker;
marker; gene; 88.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               221 ATGACACCTTCTCAGGTTGCCTTTGAAATAAGAAGGAACTCTTTTACCAGGAGAAGTTTTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   590
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              638
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           113
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to bone marrow expressed polynucleotides and proteins. These sequences can be used in the treatment of inflammatory conditions (eg arthritis, Crohn's disease), cancer, central and peripheral nervous system diseases and neuropathies, such as Alzheimer's, Parkinson's and Huntington's diseases, myeloid and lymphoid disorders, head trauma, cerebrovascular diseases, myeloid and lymphoid cell disorders, platelet disorders, stem cell disorders, bone degenerative disorders, autoinmune disorders, for example multiple solerosis, diabetes and arthritis, viral and bacterial infections, allergies and blood coagulation disorders. The present sequence is a DNA allergies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              11

Rat brain polypeptides, nucleic acids and antibodies, useful for diagnosis and treatment of central nervous system disorders and disorders associated with aberrant apoptosis.

Claim 1; Page 146; 161pp; English.

The invention relates to human homologues of neuronal apoptosis regulated CC candidate (NARC) nucleic acid molecules and proteins derived from rat brain and programmed cell death libraries. The nucleic acids of the invention are useful for assaying the presence of a nucleic acid molecule and for chromosome mapping. They are also used in gene therapy and antisense therapy. The NARC sequences are useful for treating central nervous system disorders and disorders involving aberrant apoptosis, for inducing an immune response and for isolating binding partners. Diseases treated include spleen disorders (e.g. tuberculosis and congestive congasture's syndrome and bronchial asthma), liver disorders (e.g. viral goodpasture's syndrome and bronchial asthma), liver disorders (e.g. viral companies), infectious disorders (e.g. viral companies), infectious disorders (e.g. viral companies), hand disorders (e.g. vorts and myocardial infarction), kidney disorders (e.g. heart failure, capphalopathy and hydrocephalus), heart disorders (e.g. cores and pancratics) and pancratics of successive constructions partners and epididymis disorders (e.g. cysts and cappaces (e.g. pancratitis and diabetes). The present sequence is human constant apoptosis regulated candidate (NARC) 98 DNA

Sequence 2738 BP; 880 A; 450 C; 540 G; 868 T; 0 U; 0 Other;

glomerulonephritis, osteoporosis, AIDS (acquired immunedeficiency syndrome), Parkinson's disease, Alzheimer's disease, stroke and dermatitis. These may also be used in drug screening. The invention also useful in gene therapy. The present sequence is human neuronal apoptosis regulated candidate (NARC) cDNA.
                                                                                                                                                                                                                                                                                                                                   TyrGlyLeuGlnProAspArgTrpThrGluTyrSerIleGlnThrMetGl

It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Center: Washington University Genome Sequencing Center
